

1978c

“Spin-Plane Magnetic-Coil Maneuvers,” M. Grell and M. D. Shuster, Sec. 19.2 in J. R. Wertz (ed.), *Spacecraft Attitude Determination and Control*, Springer Scientific + Business Media, Berlin and New York, ISBN 90-277-0959-9, 1978, pp. 642–649.

The section was written almost entirely by Mihaly Grell. I made only minor revisions during proofing after Grell had left the Computer Sciences Corporation. The shared authorship was not at my request or suggestion, but was the decision of the editor, so that I might receive a free copy of the book for my efforts in proof-reading the entire volume. The copyright for this material is now held by Springer Scientific + Business Media. Previously, it was held by D. Reidel Publishing Company, Dordrecht, the Netherlands (1978–1995) and then by Kluwer Academic Publishers, Boston and Dordrecht (1995–2004). Because I fear the “wrath” of Springer, 1978c does not appear in the collection. (Springer would probably give me permission, but I haven’t pressed it, because I do not feel that the work is really mine.)

*Spacecraft Attitude Determination and Control*, despite its age, continues to be a unique reference for many details of spacecraft attitude mission support.
