

1984b

“Efficient Estimation of Initial-Condition Parameters for Partially Observable Initial Conditions,” M. D. Shuster and D. W. Porter, *Proceedings, 23rd IEEE Conference on Decision and Control*, Las Vegas, Nevada, December 12–14, 1984, pp. 1272–1275.

1984b is the final installment of the trilogy which included 1983b and 1983e. It is probably the weakest of the three papers.
