

1993d

“Attitude Determination in Higher Dimensions” (Engineering Note), M. D. Shuster, *Journal of Guidance, Control and Dynamics*, Vol. 16, No. 2, March–April 1993, pp. 393–395.

This piece of whimsy gave the form of the usual attitude representations in spaces of dimension higher than 3 and the higher-dimensional analogue of the TRIAD algorithm. This provided an insight into the nature of the TRIAD algorithm in three dimensions.
