

1994c

“Spacecraft Attitude Determination and Control,” M. D. Shuster, Chapter 5 in V. L. Pisacane and R. C. Moore (eds.), *Fundamentals of Space Systems*, Oxford University Press, ISBN 0-19-507497-1, March 1994, pp. 245–336.

This chapter presented Spacecraft Attitude Determination and Control essentially at the level of common knowledge by engineers and knowledgeable attitude software designers in the Aerospace industry around 1980. Thus, there is barely a brief mention of any of my work, which did not begin to be published in journals until 1981, except in “further reading” sections.. The copyright for this work is held by Oxford University Press. Because I fear the wrath of Oxford University Press, 1994c does not appear in this collection.

Superseded by a second edition, 2005d, which has about 90% overlap with the first edition.
