

1996a

“MAGION Small Spacecraft as a Tool for Flight Dynamics Learning” (abstract), V. Khrapchenko, M. Pivovarov, N. Eismont, P. Třska, and M. D. Shuster, Proceedings, Fifth IAA Symposium on Small Satellites for Earth Observing, Berlin, Germany, November 4–8, 1996, p. 216.

This abstract was derived from an unsuccessful proposal. There is little content.

I had no idea that this conference abstract even existed until I discovered it in 2006 while scanning Google Scholar. I am thankful to Luc Fraiture of ESA for providing me with a copy and to F. Landis Markley for converting it to a file I was able to convert for this collection.
