“Filter QUEST or REQUEST,” Malcolm D. Shuster, submitted to the *Journal of Guidance, Control and Dynamics*.

It has been known for a long time that Filter QUEST, published in 1989 (my publication 1989c) and REQUEST, published in 1996, were mathematically equivalent. It is not generally realized that essentially they are analytically and computationally identical. This is demonstrated in the present work.

Although the present article makes no allegations or even mentions the deficiency of the REQUEST citations, these have been a sore point for this author for more than a decade. Readers of this comment should examine the comment to publication 1989c.
